

E-Voting Readiness Index

3rd International E-Voting Conference, EVOTE08

Lochau/Bregenz
8th of August, 2008

Robert Krimmer
Ronald Schuster

Development of E-Voting

World-wide, transnational, large-scale remote e-voting elections are not there yet:

1. Remote e-voting is a topic for incremental introduction
2. Size of elections is rather small
3. Fall back to paper is must for legally binding elections
4. TAN is the choice if „large“ numbers of voters to be reached, smart card is a minority program
5. Organisational secrecy wins over crypto

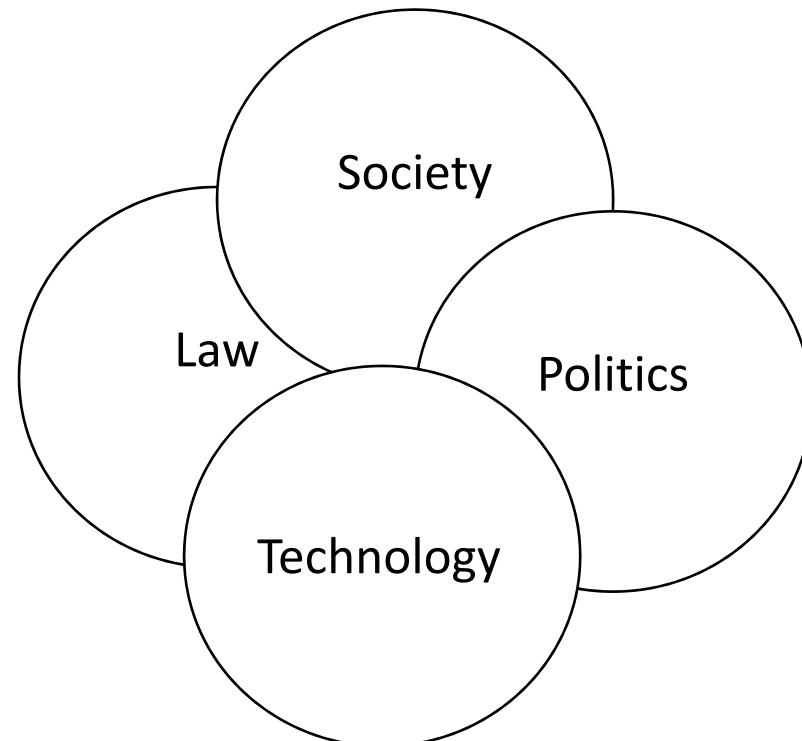

Mission

- **Analyse and compare the environment for the introduction of E-Voting.**
- Contextual model was developed and
- Applied with the value benefit analysis to compare
- Evaluation of all EU member states and Russia, Switzerland, the United States, and Venezuela.

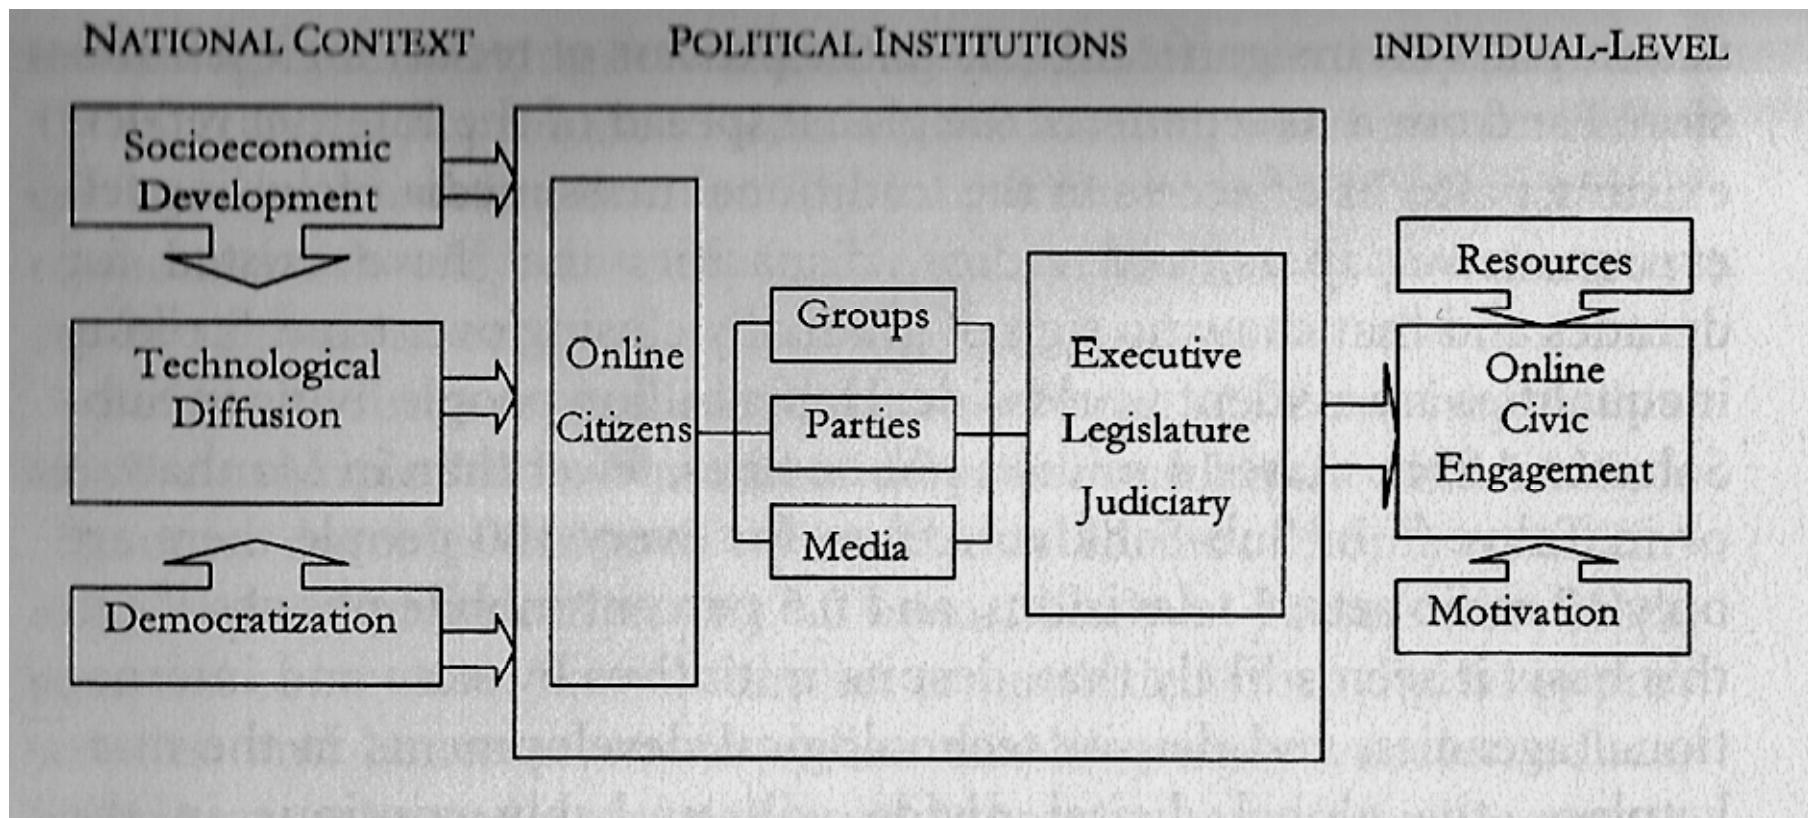

Dimensions of E-Voting

Dimensions of eDemocracy, Robert Krimmer

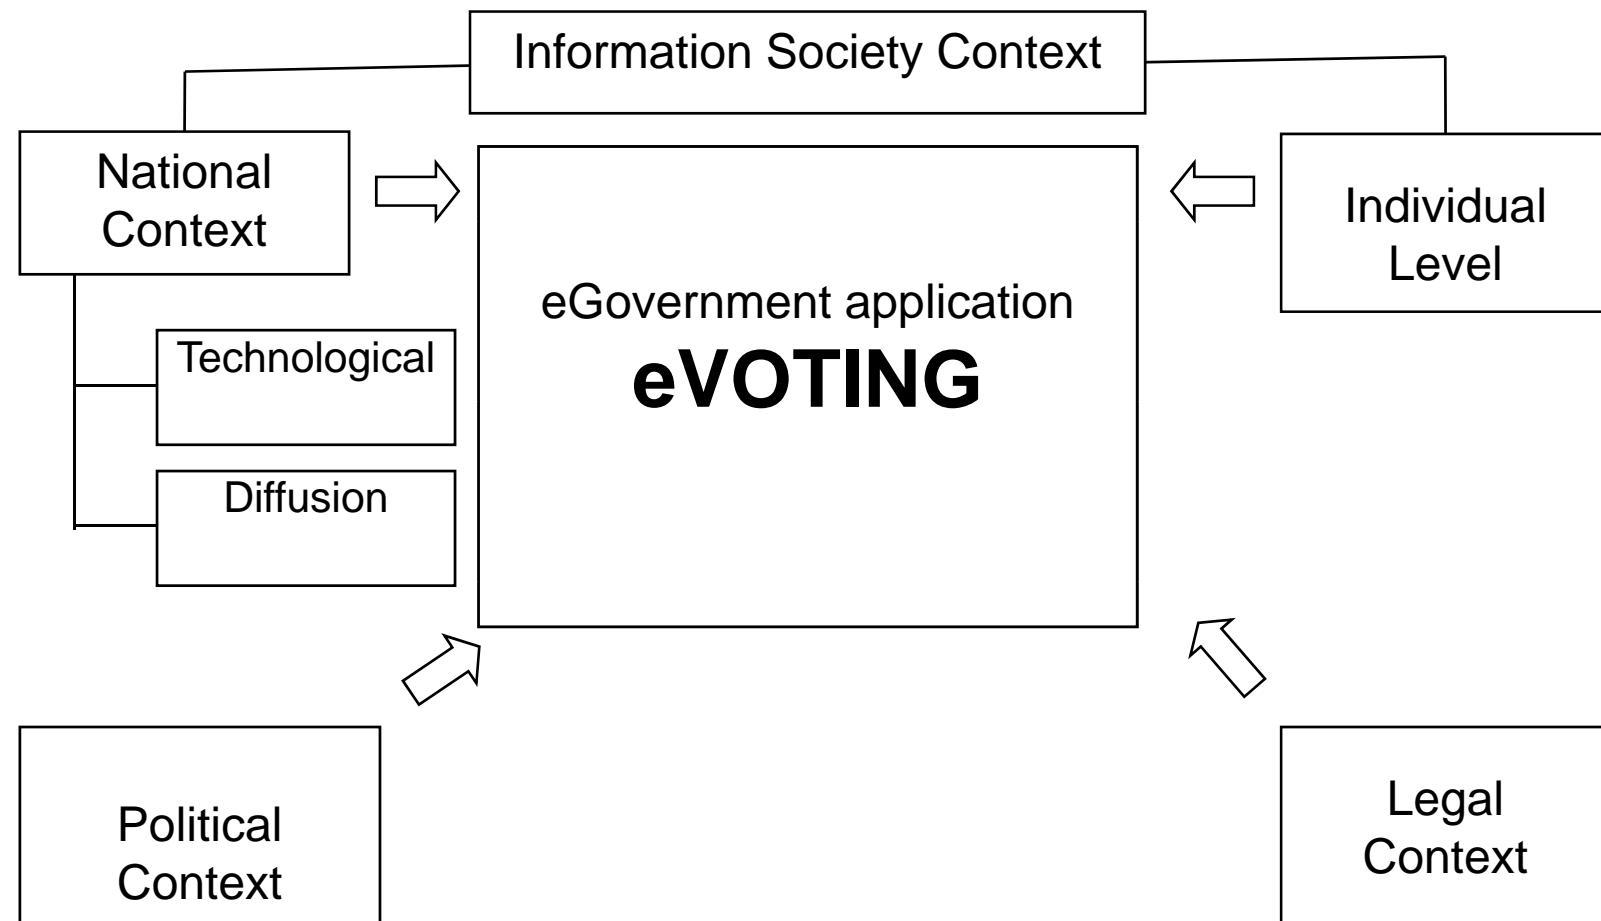

Digital Divide

Digital Divide, Pippa Norris

ERI Model

The E-Voting Readiness Index Contextual Model, Ronald Schuster

Value Benefit Analysis- Zangemeister

Arranging elements
according to preferences of
the decision maker

- Definition situation relevant goals
- Description alternatives to reach goal
- Preference order to achieve goal

Value Benefit Analysis – Stahlknecht / Hasenkamp

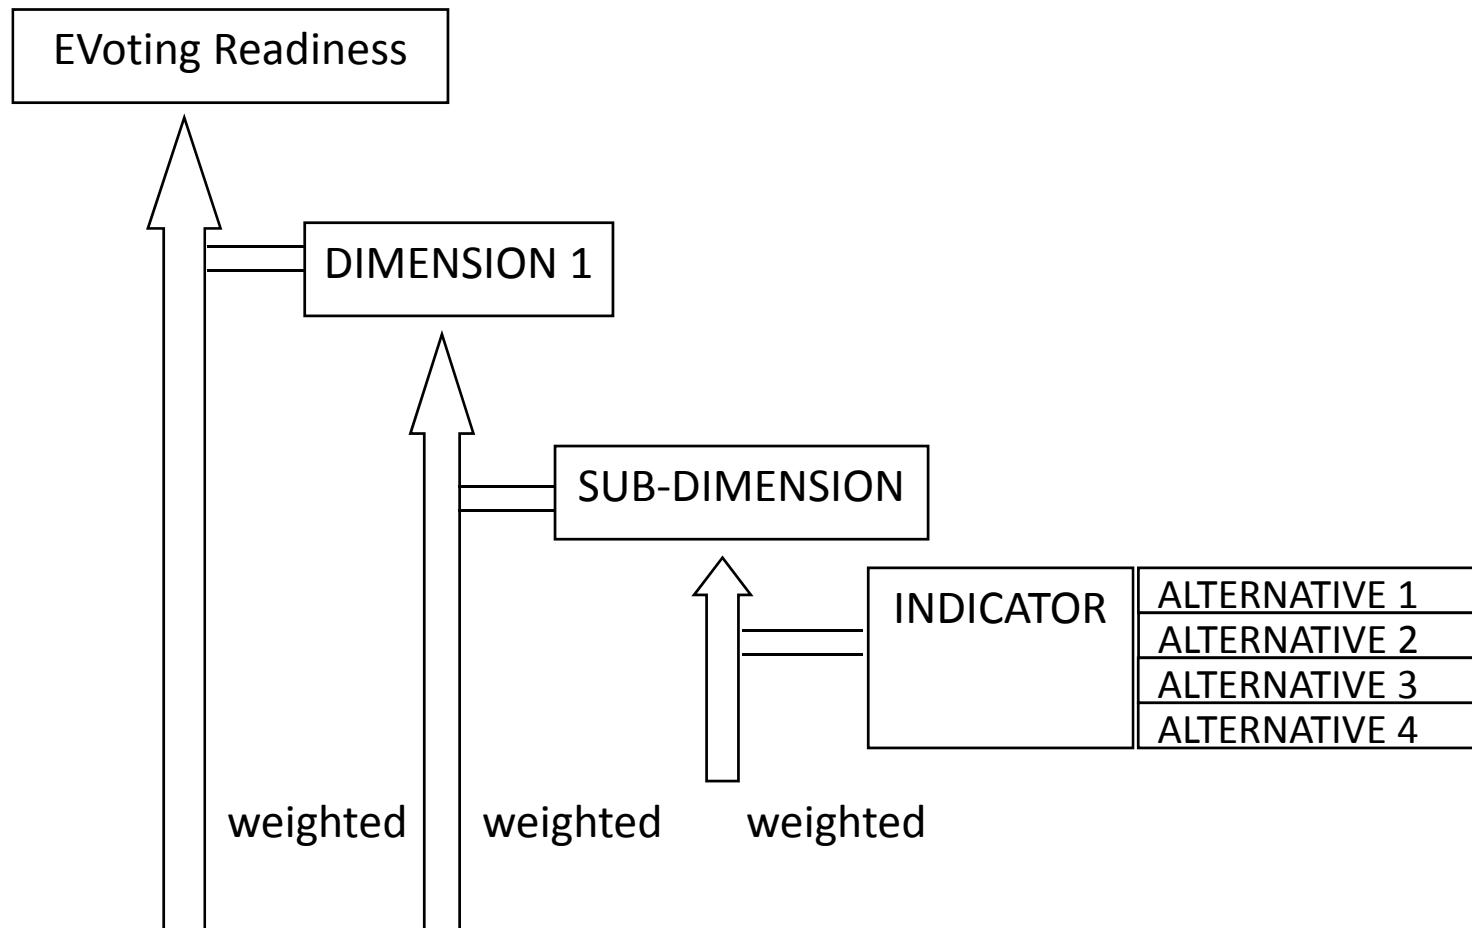

Used for assessing tenders
in IT- Sector

- List and weighting of criteria
- Confrontation of the units of analysis
- Evaluation and scoring of the units of analysis

Criterion	Weight	Offer	
		A	B
X	30 %	Points	Points
Y	40 %	Points	Points
Z	30 %	Points	Points
Value benefit		Value	Value

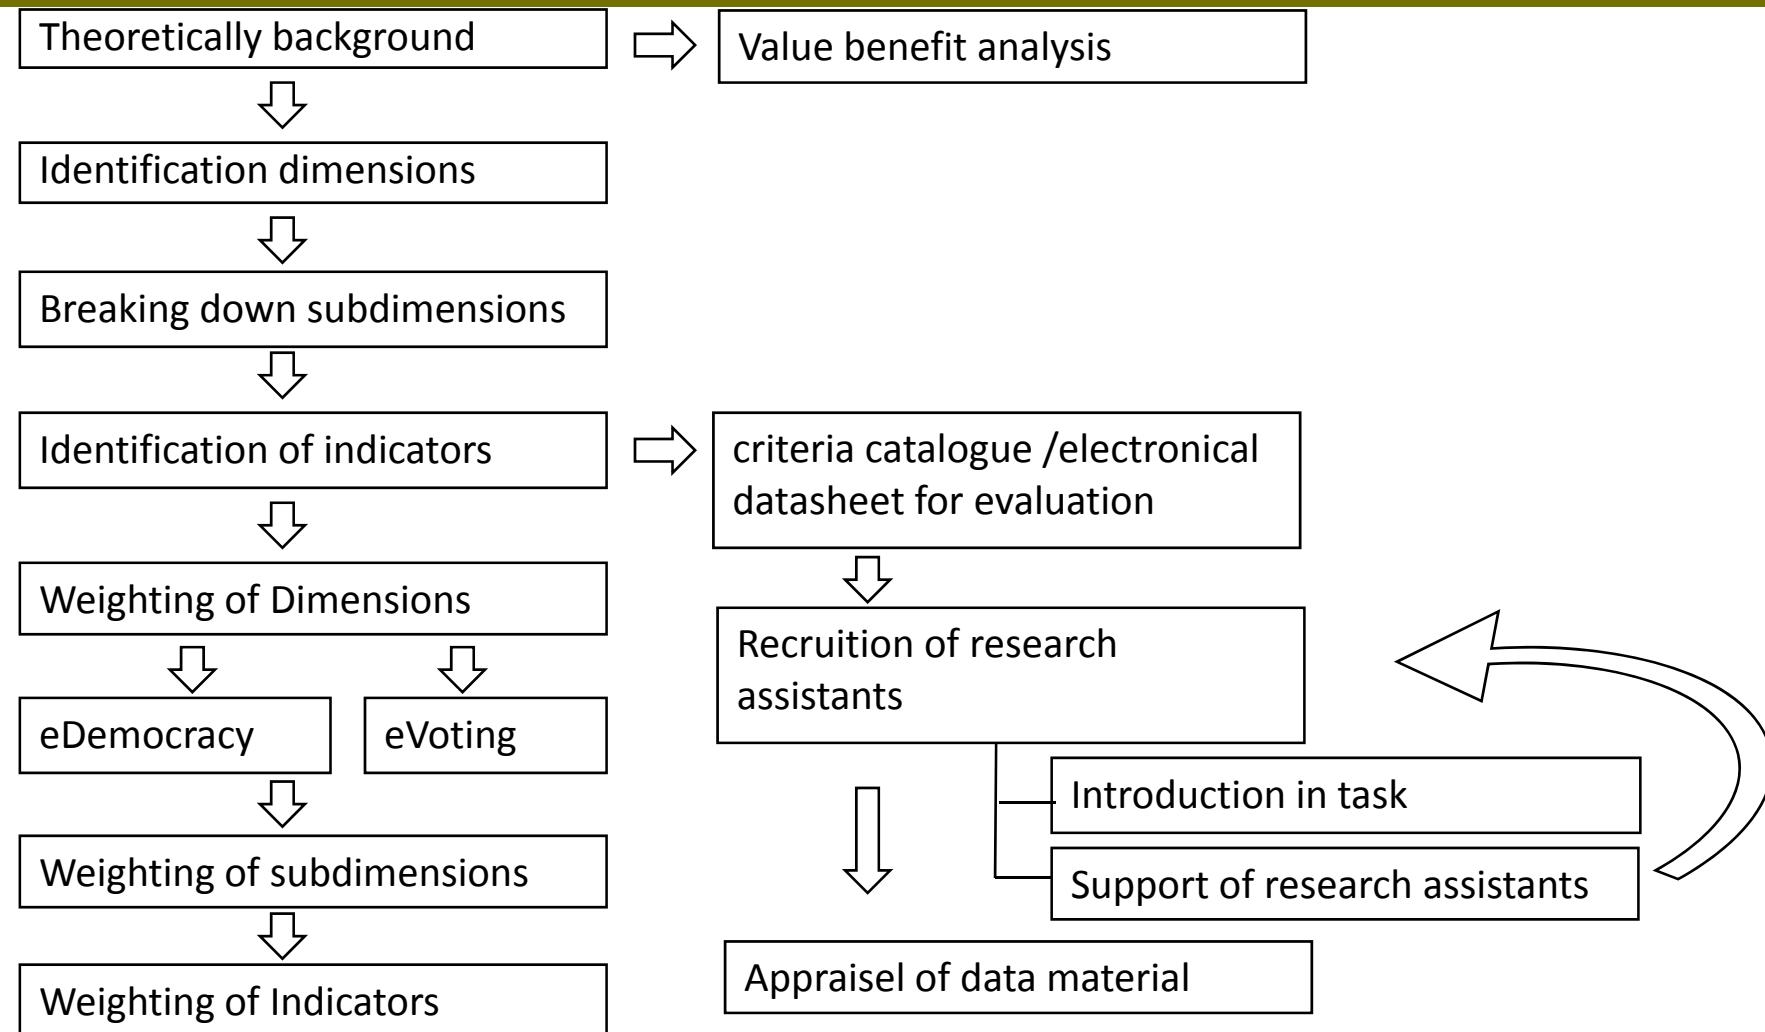

Value Benefit Analysis- ERI

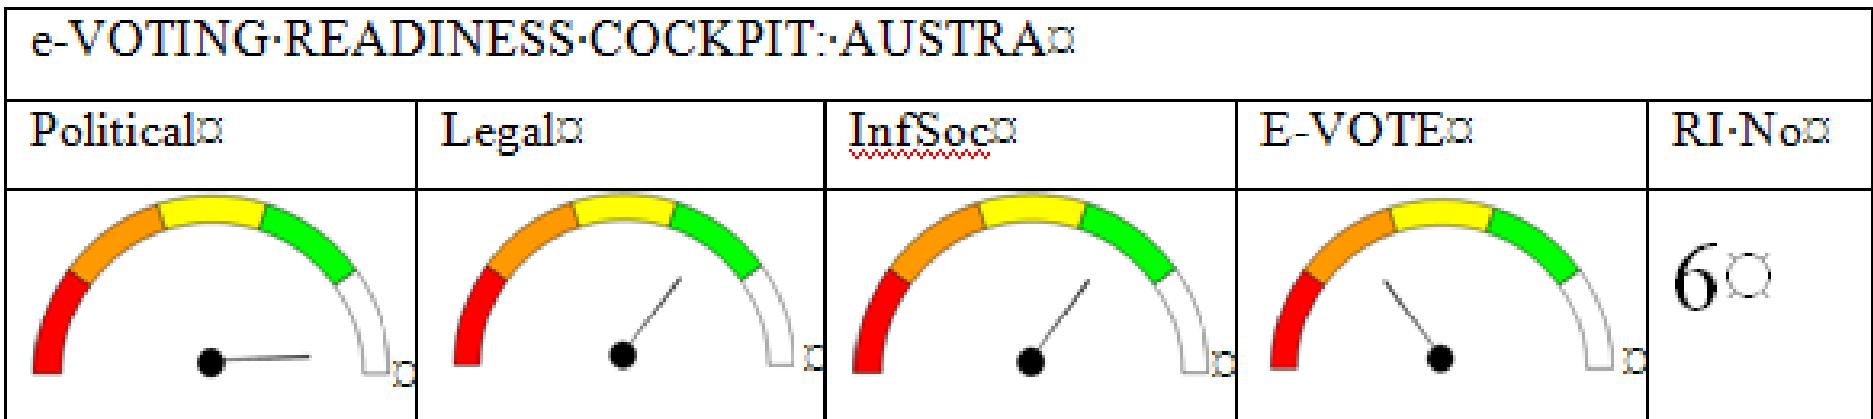

ERI evaluation procedure, own representation

Process

E-Voting Readiness Cockpit

Political Context - Subdimensions

- Stateness
- Constitutional state
- Institutional stability
- Election system and election turnout
- Political participation
- Political Aims

Legal Context – Subdimensions

- Election system
- Supplementary protocol for human rights
- Realization Council of Europe recommendation

InfoSoc Context - Subdimensions

- Status of listings
- Status of eGov infrastructure
- Prices for entrance to ICT services
- Expenditures for ICT
- Transaction penetration
- Degree: informatization of public admin
- Diffusion ICT services

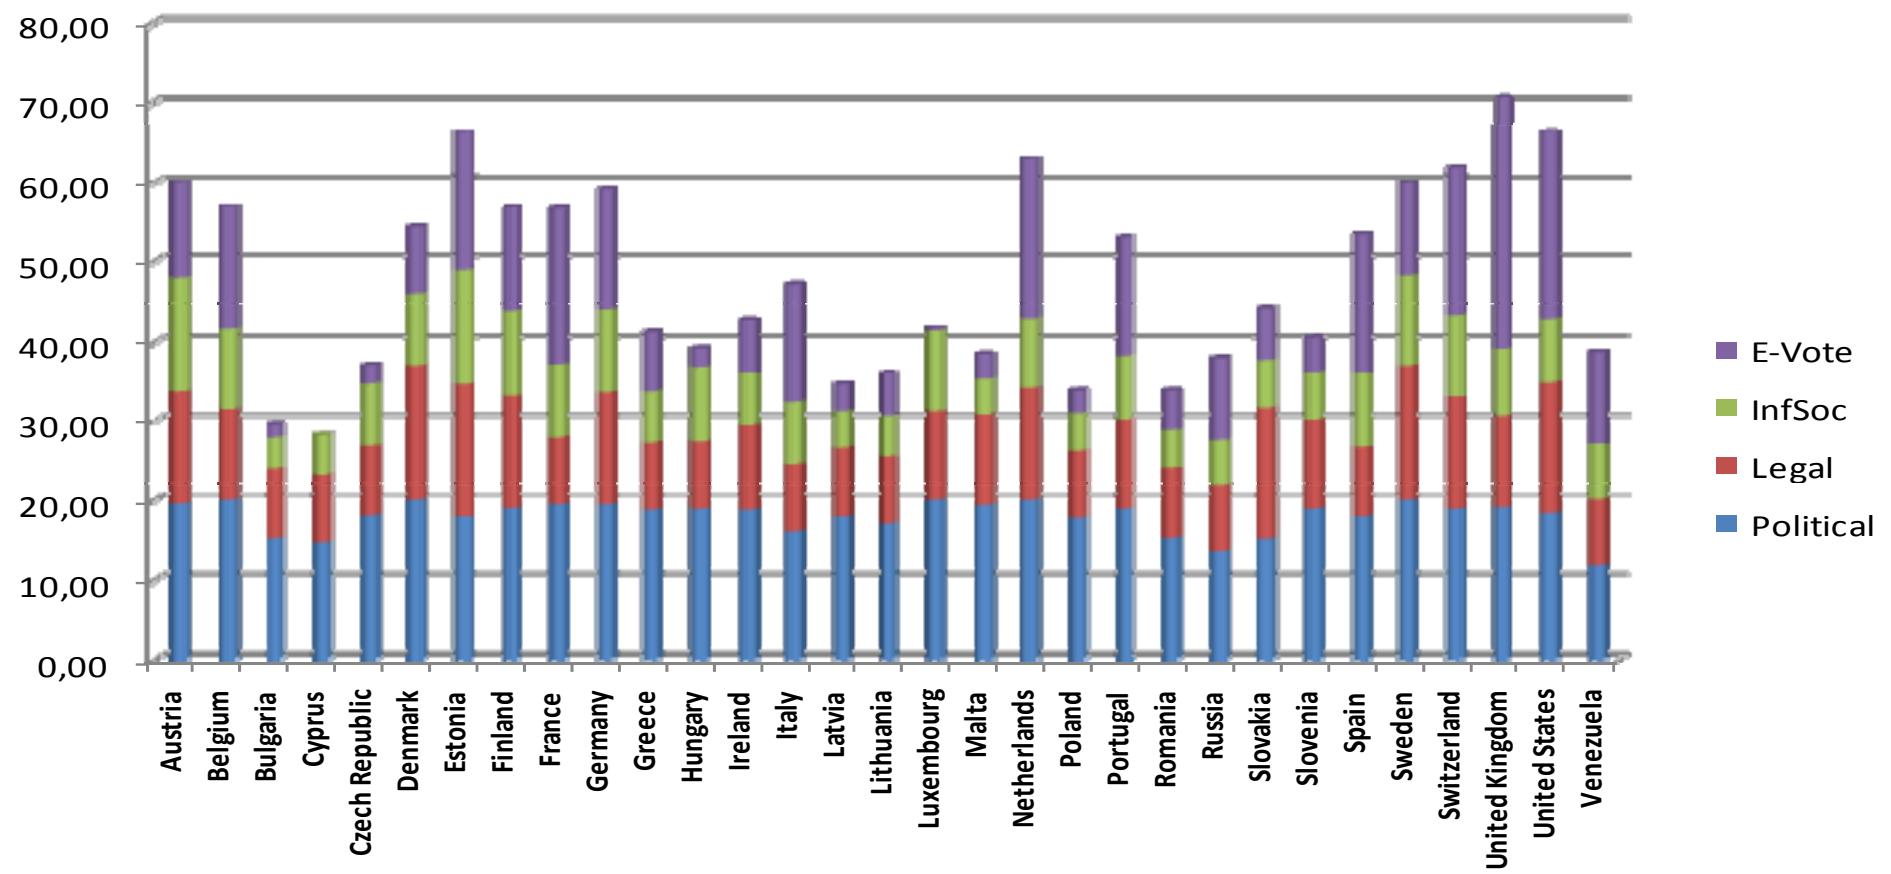

eVote Context – Subdimensions

- Political Debate
- Private elections
- Public elections

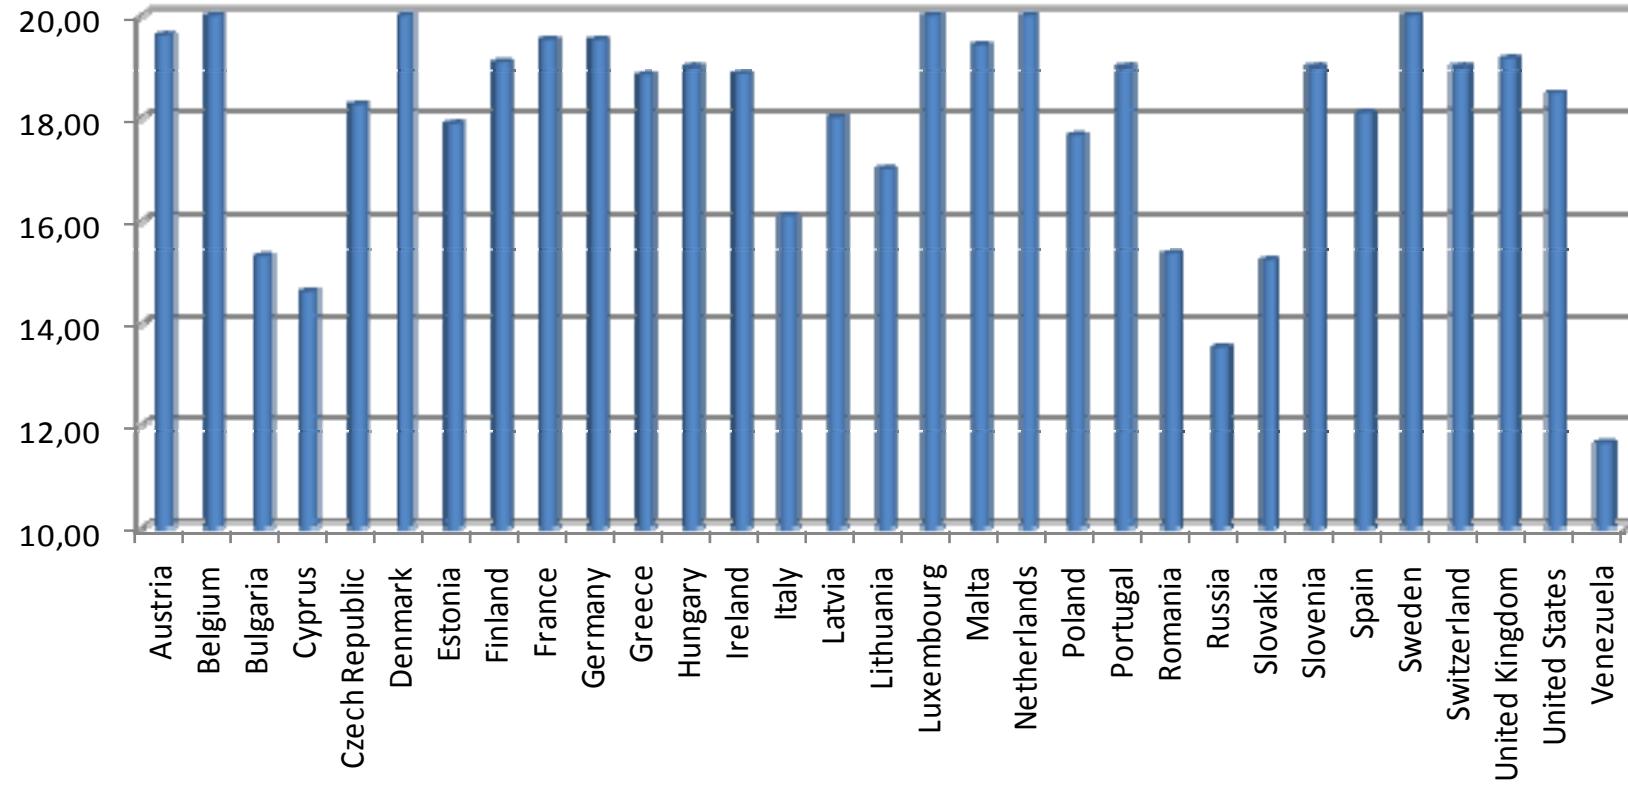

ERI - Scored Dimensions

Political Context

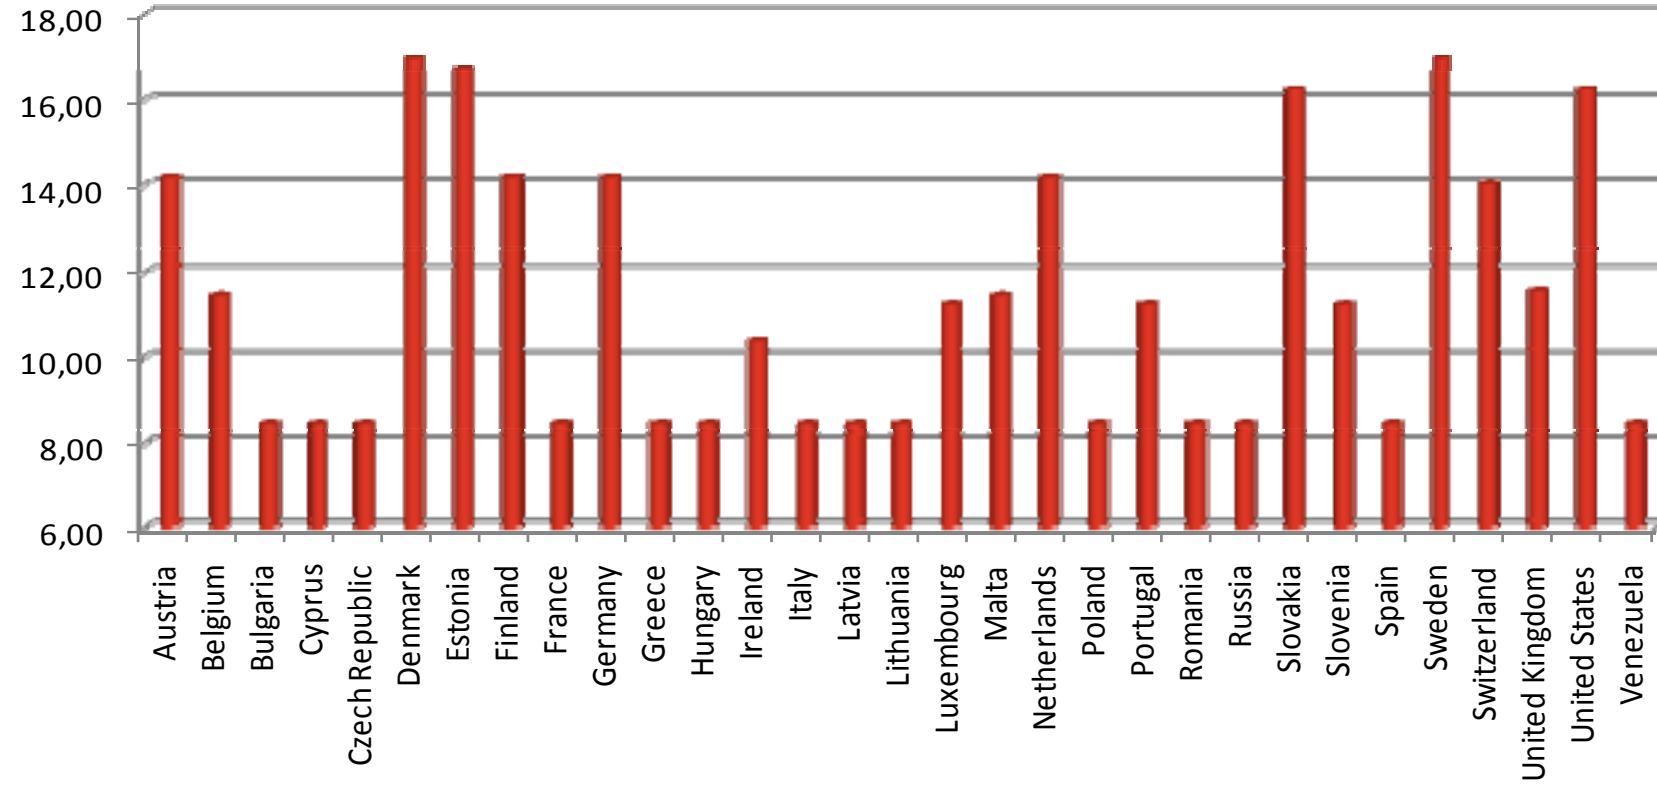

Scored Political Context

Legal Context

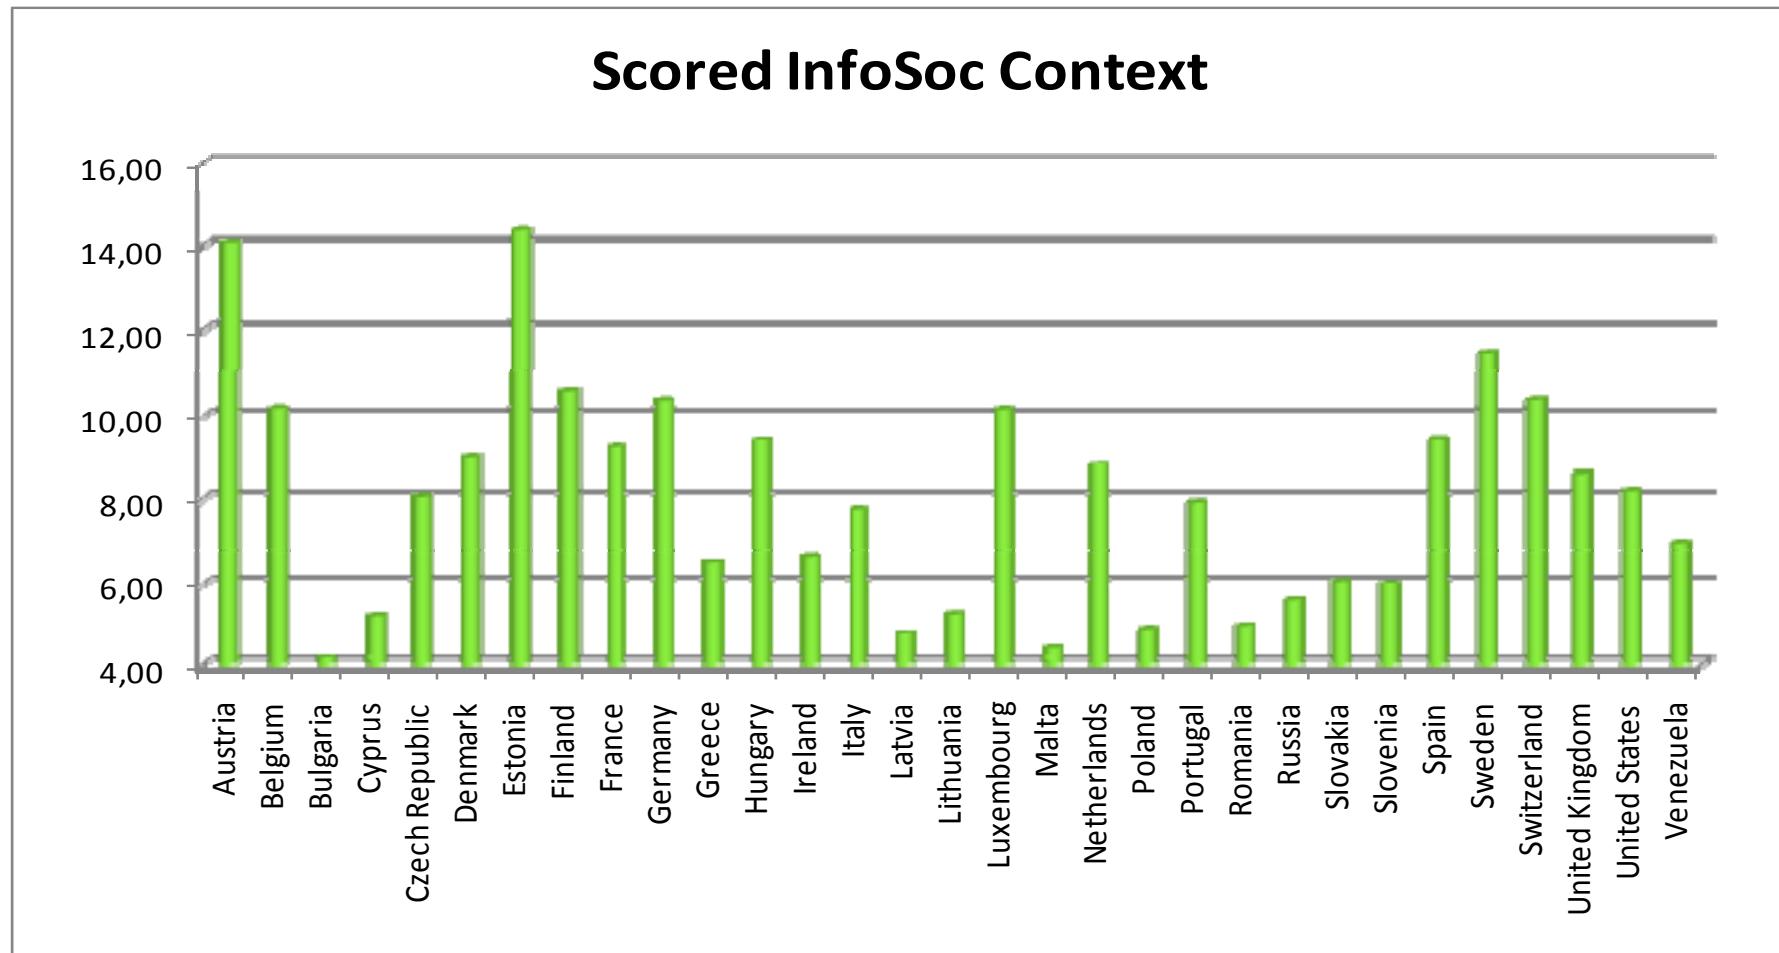

Scored Legal Context

InfoSoc Context

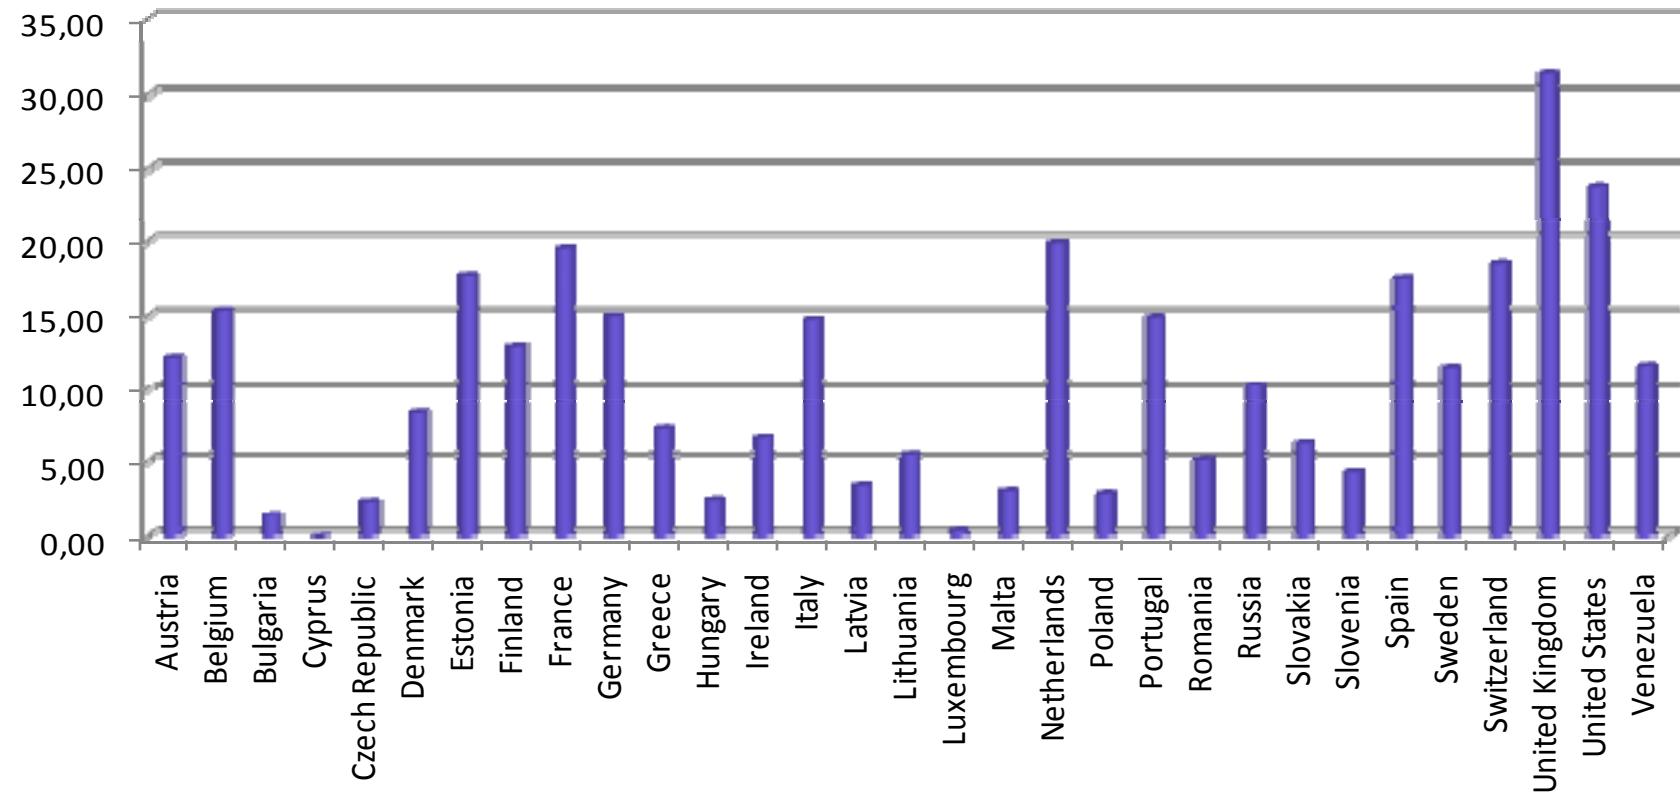

Scored InfoSoc Context

E-Voting Context

Scored E-Vote Context

Results

- Developed a Conceptual Model for E-Voting (could also be used for other e-democracy applications)
- First overview on contextual factors
- Vast amount of data
- Analysis of relation between contextual factors as well as in regard to actual implementation of e-voting Benchmark (?)
